As of 2nd June 2020, numbers of lab-confirmed positive cases now include those identified by testing in all settings (pillars 1 and 2).

NB The higher case numbers seen in early June include a number of cases that have been falsely identified as positive following an issue at the laboratory. For further information please see the following statement from Somerset NHS Foundation Trust <https://somerstft.nhs.uk/?news=issue-affecting-some-covid-19-test-results-for-some-inpatients-at-musgrove-park-hospital>

In January 2021, we changed the presentation of deaths data to be shown compared to the average and five year high and low deaths by date of occurrence rather than date of reporting. Deaths by date of reporting fluctuates more, especially when affected by bank holidays. Reporting by date of death does mean the latest week's figures are usually slightly incomplete when first reported due to delays in registrations of some deaths whereas the comparison years are more complete. For week 53 we have taken an average of 52 and week 1 comparison years.
